Variable Cutter System from Roadtec

The Roadtec VCS™ Variable Cutter System allows the RX-500 and RX-700 cold planer models to cut at widths of 24", 36" and 48" (60cm, 91cm, and 121cm) without having to remove the cutter housing. Changing cutter widths is fast and easy.

With the VCS the primary conveyor is shifted over 8 inches (20cm) so that even the 26" (66cm) drum has "visibility" of the discharge belt, making material removal much better. A hydraulically adjustable, segmented rear moldboard is part of the VCS package. It easily adapts to any of the three cutting widths.
